Summary

Highly motivated Postdoctoral Research Fellow with expertise in quantum-mechanics-based computational techniques, particularly Density Functional Theory (DFT) and the Semi-Empirical Pseudopotential Method (SEPM). Focused on developing and applying advanced computational frameworks to investigate electronic and optical properties of emerging quantum materials, including 2D materials (graphene, TMDCs), nanostructures, and molecular systems (fullerenes). Key interests include exciton physics in 2D heterostructures and method development for efficient, accurate material simulations.

Education

- Sep 2016 – Jul 2023 **Ph.D. in Physics**, *Taiwan International Graduate Program (TIGP), Academia Sinica & National Central University*, Taipei, Taiwan
Dissertation: Novel Computational Approaches for Electronic Structure of Two-Dimensional Materials using the Semi-Empirical Pseudopotential Method
Supervisor: Prof. Yia-Chung Chang
- Oct 2006 – Jun 2009 **M.Sc. in Physics**, *Central Department of Physics, Tribhuvan University*, Kirtipur, Nepal

Research Experience

- Aug 2023 – Present **Postdoctoral Research Fellow**, *RCAS, Academia Sinica*, Taipei, Taiwan
- Developing and applying SEPM and DFT to investigate the electronic and optical properties of quantum materials (TMDCs, fullerenes, graphene).
 - Modeling exciton binding energies, dynamics, and optical responses in monolayer and bilayer TMDCs.
 - Investigating charge transfer mechanisms in C₆₀ molecular assemblies.
 - *Supervisor:* Prof. Yia-Chung Chang
- Sep 2016 – Jul 2023 **Ph.D. Researcher**, *Academia Sinica & National Central University (TIGP Program)*, Taipei, Taiwan
- Developed and implemented the Semi-Empirical Pseudopotential Method (SEPM) for 2D materials.
 - Applied SEPM to study electronic structures of graphene, armchair graphene nanoribbons, and monolayer TMDCs.
 - Parameterized local and non-local pseudopotentials for various material systems.
 - *Supervisor:* Prof. Yia-Chung Chang

Technical Skills

Computational Methods

- Density Functional Theory (DFT)
- Semi-Empirical Pseudopotential Method (SEPM)
- Many-Body Perturbation Theory (GW, BSE)
- Exciton Physics & Dynamics Modeling

Programming

- Python (NumPy, SciPy, Matplotlib)
- Fortran, C
- Bash Scripting
- Version Control (Git, GitHub)

Software & Environments

- Local Planar Basis DFT package
- Quantum ESPRESSO, VASP (DFT Packages)
- High-Performance Computing (HPC) Environments

Material Systems

- 2D Materials (Graphene, TMDCs)
- Graphene Nanoribbons, Fullerenes (C_{60})
- Exciton Physics in Bilayer TMDCs

Languages

- Nepali (Native)
- English (Fluent)
- Chinese (Basic)

Awards and Honors

- Taiwan International Graduate Program (TIGP) Scholarship for PhD (Sep 2016 – Jul 2023)
- NAST Research Grant for Master's Thesis, Nepal Academy of Science and Technology (Oct 2008)

Publications

Preprints

- **Paudel, R. K.**, Ren, C.-Y., & Chang, Y.-C. (2025). Semiempirical Pseudopotential Method for Transitional-Metal Dichalcogenides. *arXiv:2406.15913*. (Submitted to Physical Review Applied)
- Cha, S., Xu, Z., Ouyang, T., Yao, H., **Paudel, R. K.**, Taniguchi, T., Watanabe, K., Joe, A. Y., Chang, Y.-C., Gabor, N. M., & Lui, C. H. (2025). 2P Interlayer Exciton Revealed by Hybridization in Bilayer MoS_2 . (Submitted to Nature Physics)
- Tianyi Ouyang, Erfu Liu, Soonyoung Cha, **Raj Kumar Paudel**, Yiyang Sun, Zhaoran Xu, Takashi Taniguchi, Kenji Watanabe, Nathaniel M. Gabor, Yia-Chung Chang, Chun Hung Lui. Brightening Interlayer Excitons by Electric-Field-Driven Hole Transfer in Bilayer WSe_2 (2025) submitted to Physical Review Letters

Peer-Reviewed Journal Articles

- **Paudel, R. K.**, Ren, C.-Y., & Chang, Y.-C. (2023). Semi-Empirical Pseudopotential Method for Graphene and Graphene Nanoribbons. *Nanomaterials*, 13(14), 2066.
